SUMMARY

Backend developer with 1.5 years at a healthtech company (internship converted to full-time), shipping production APIs and background jobs on Google Cloud in Python, Node.js and C#/.NET. Java is my core language (CDAC PG-DAC; Spring Boot microservices with Kafka, Redis and PostgreSQL). Strong in API design, concurrency, caching, FHIR R4 and LLM integration.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (Node.js), C#, SQL (PL/pgSQL)
Frameworks: Spring Boot, Spring Security, Spring Data JPA, Spring Cloud Gateway, Flask, Express.js, ASP.NET Core
Data: PostgreSQL, Redis, MongoDB, BigQuery, Firestore, Apache Kafka, MySQL
Cloud & Tools: Google Cloud (Cloud Run, Cloud Run Jobs, Cloud Scheduler, Cloud Build), Docker, Git, CI/CD
Practices: REST API design, microservices, idempotency and audit trails, concurrency, caching, FHIR R4, LLM integration

EXPERIENCE

IntelligentDX Healthtech software for eye-care practices ▪ Pune, India *Apr 2025 – Present*
Stack: Python (Flask), Node.js (Express), C#/.NET, PostgreSQL, MongoDB, Redis, BigQuery, Google Cloud, React/TypeScript

Junior Software Developer (Full-time) *Nov 2025 – Present*

- Built a treatment-plan booking API that books every visit of a multi-appointment plan across up to 15 parallel lanes, with atomic slot reservation, one audit row per appointment and 200/207/422 responses; in production since Sep 2026.
- Designed background sync (Cloud Scheduler → Cloud Run Jobs → PostgreSQL) for 213 providers × 111 locations × 70 visit types, replacing slow or timing-out external calls with indexed database reads.
- Cut the slot-search API from about 2.7–3.6 s to 1.7–2.5 s with a concurrent pager, and moved scheduling APIs to an EHR's FHIR R4 API with unchanged API contracts.
- Designed an AI rule-generation platform around Claude (architecture, low-level design, API contract) with validation gates and a repair loop; prompt caching cut cost per generated rule by about 27–31%.
- Built cancel and reschedule APIs on an EHR with no native reschedule: book the new slot first, timed retries, HTTP 207 on partial success and a full audit trail.
- Owned an accuracy dashboard end to end (Flask + React/TypeScript); QA reconciliation passed 228 of 229 checks.
- Authored 400+ pull requests, reviewed 180+, and wrote 59 design, API-contract and runbook documents.

Software Engineer Intern (Internship, converted to full-time) *Apr 2025 – Oct 2025*

- Migrated 10 API read paths across 5 C#/.NET microservices from MongoDB to PostgreSQL in about 8 weeks (PL/pgSQL functions, Dapper repository layer, feature-flag fallback); 9 reached production with identical responses.
- Built SSO login, token-validation and token-refresh APIs in a .NET identity service using Microsoft Azure AD.
- Built the first version of a claim-scrubbing integration in Node.js: an XML-to-JSON claim gateway and a Redis-first cache with PostgreSQL and Firestore fallbacks.

PROJECTS

Blockchain-Inspired Online Voting System *Apr 2026 – Present*
Java 17 ▪ Spring Boot ▪ Spring Cloud Gateway ▪ Eureka ▪ JWT ▪ Kafka ▪ Redis ▪ PostgreSQL ▪ Docker ▪ GitHub

- 6 Spring Boot microservices; the gateway handles routing, rate limiting and JWT checks; a PostgreSQL database per service.
- Three-layer double-vote protection (Redis check, database unique constraint, idempotency keys), a SHA-256 hash per vote, and real-time results aggregated from Kafka events.

Courier Management System *2025*
Java ▪ Spring Boot ▪ Spring Data JPA ▪ Spring Security (JWT) ▪ MySQL ▪ React ▪ GitHub

- Full-stack platform with Admin, User and Delivery Partner modules; JWT-secured Spring Boot REST API with OpenAPI docs and a React frontend.

EDUCATION

Post Graduate Diploma in Advanced Computing (PG-DAC, CDAC) *Sep 2024 – Feb 2025*
Sunbeam Institute of Information Technology, Pune

Bachelor of Technology (B.Tech) – Mechanical Engineering *(CGPA 7.48)* *2019 – 2023*
Modern Education Society's College of Engineering, Pune

CERTIFICATIONS

- Java Full Stack LIVE Course – Spark 2.0
- DSA Course, Alpha batch – Apna College
- Google Cloud Bootcamp – GeeksforGeeks
